Bernard Yang

JR. FRONT END DEVELOPER
VANCOUVER, BC

PROJECTS

Raider.io API Data
An app that calculates WoW in-game player count using automation with AWS Lambda and CloudWatch

- Implemented a Lambda function to automate API call and write to DynamoDB
- Used API Gateway to read database and output to front end using Chart.js

Twitter React
A simple Twitter like app with login validation, and reusable React components

- Used modern React Hooks for form state management including useReducer
- Implemented responsive web design for mobile devices

Make My Day
A project management app and Kanban board for teams to manage projects and organize tasks

- Built drag and drop Kanban board that auto-prioritize tasks based on due date and priority
- Created RESTful routes for users to create, edit and delete projects and tasks
- Implemented WebSocket for team members to communicate in real-time
